

GC-2

Premium Thermal Compound

Best-in-class GC-2 thermal compound with a net content of 7g enables an effective heat transfer and an easier application on CPU, VGA or Chipset Cooler thanks to the GELID applicator.

With a specific gravity of more than 2.8 g/cm^3 , a low thermal resistance and an optimal heat conductivity the GC-2 is non-electrical conductive, non-corrosive, no bleeding, non-curing and very user-friendly.

Recommended and Awarded by

"I found the GC-2 compound very easy to use and spread on both the IHS and the base of a few cooler types I tried it on. With the four thermal pastes I tried including the previous GELID Solutions compound, I found the GELID Solutions GC-2 thermal compound to be the best performer. GC-2, in our lab-like environment of testing, performed just shy of 2° Celsius better than the previous one and more than a degree better than both of the others tested. Great job on the new thermal compound, it makes it to the top three as far as what thermal compound I would purchase."

Tweaktown

"GELID Solutions previously impressed us with their previous paste and we are left with a similar impression of GC-2. Their new thermal compound exceeds the performance of Arctic Cooling's MX-2 under load and idle conditions which makes it our first choice in any system build."
