Launch of “WING 12 PL” PWM LED Case Fan

120mm Case Fan with Unique Nanoflux Bearing, PWM, Green or Blue LED

HONG KONG, 18 December, 2009

Thermal Solutions specialist *GELID Solutions* launches their first 120mm LED fan in green or blue light with unique magnet bearing and PWM.

The **WING 12 PL** features a unique Nanoflux bearing which ensures a friction-free and silent operation. Thanks to the clever design and magnetic bearing the impeller can be detached for easy cleaning. Additionally fan blade winglets were designed to achieve larger airflow and greater static pressure. In comparison to the multi-award winning Wing series the Wing 12 PL contains a premium PWM control so the temperature can be controlled precisely by the BIOS. LED lights in green or blue color were added to the WING 12 PL to give the fan a specific color.

The patented Nanoflux bearing (NFB) incorporates a clever magnetic design, very high precision manufacturing and runs friction-free and operates noiseless. Electromagnetic fields are exploited to keep solid parts from touching. The load is carried by a magnetic field. The Nanotechnology composite ensures lowest abrasion and extreme durability (MTTF 100'000 hours). The nano composite material is self lubricating Compared to conventional sleeve and ball bearings the high precision self-lubricated material of GELID Solutions Nanoflux bearing eliminates oil leakage.

“We created the Wing 12 PL especially for gamers and modders who are looking for a silent but colourful fan with unique features,” said VC Tran Marketing Director of GELID Solutions

Wing 12 PL has a MSRP of USD 19 and EUR 13.
These fans are RoHS, WEEE conform and carry a 3 year warranty.
